課程目標

This foundation course introduces the study of global health and its theories, perspectives, methods, and evidence. The course focuses on challenges, diseases, and conditions of major public health importance, their patterns of global mortality and morbidity, their social, economic, and political determinants and consequences, their inequalities and inequities, and the population-based interventions as well as social and institutional responses to these challenges structured through communities, national health systems as well as international agencies, consortia, and alliances.

主要探討議題

- Measurements of Health
- Social determinants of health
- Health and economic development
- Priority setting and resource allocation
- Challenges of global health
- Global health governance and health systems
- Innovation and technology for global health
